

Data Classification Policy

Data is classified into four levels: Public, Internal, Confidential, and Restricted.

Restricted data includes PII, financial records, and health information and must be encrypted at rest and in transit.

Confidential data must be accessible only to authorized personnel with a business need.

Internal data must not be shared outside the organization without approval.

Public data requires no special handling but must still be accurate and approved for release.

All data must be labeled with its classification level at the point of creation.
